

CALL WAITING

Now while talking on the phone you won't miss another call. With CALL WAITING, a special tone alerts you to an incoming call when you are on the phone; the caller hears only a normal ring. You can then place your current call on temporary hold and answer the new call.

Here's how you are alerted by CALL WAITING...

- When you're on the phone, a "beep" tells you a second call is waiting. Only you hear this beep.
- If you don't answer the second call within 10 seconds, another "beep" reminds you it's there.
- The second caller hears only the normal ringing tone.

To answer the second call...

- Depress the switchhook*for about one second to place your first call on hold.
- You are automatically connected with the second caller.

To alternate between calls...

- Depress the switchhook for about one second to alternate between calls.
- Each of your conversations is private and cannot be heard by the other caller.

To end either call...

- Simply hang up.
- Your telephone will ring.
- When you answer it, you'll be connected with the other caller. The call you discontinued will no longer be on the line.

**The switchhook is that round, flat or square button the handset pushes down when you hang up the phone. Your phone is "off the hook" when that button is up.*
